

## MISSOURI CROP OUTLOOK.

Conditions Vastly Improved by the Recent Rain—How to Kill Chinch Bugs—Feeding Young Stock.

Columbia, Mo., May 12.—The general agricultural outlook continues to improve. Conditions at present are far more encouraging than at any time during the season, and the improvement is gratifying in all respects. From all over the Mississippi valley come reports of general rains, and all crops are making fine headway. Plenty of sunshine between showers makes continued farm work possible, and the crops are well advanced. Conditions in Missouri and the neighboring states are especially favorable. The monthly report, just issued by the Missouri board of agriculture, gives estimates that indicate an unusually prosperous season.

To judge from the frequent applications at the experiment stations here, the farmers are especially anxious about the chinch bug invasion just now, and the agricultural authorities are solicited for advice in the matter. The distribution of diseased chinch bugs by the stations has been discontinued, owing to the fact that spraying with a 10 per cent. solution of kerosene and water has been found to be a more effective method of exterminating the pests. In view of the unusual demand for information, however, Dr. H. J. Waters, of the state agricultural college, adds some additional advice.

"I would suggest in the first place," said Dr. Waters, "that all rubbish in the vicinity of the wheat and corn fields be burned at once, as it frequently affords a hiding place for the chinch bugs. If certain rows of wheat or corn are found to be badly infested, the bugs can be interrupted in their progress to other parts of the field by introducing, between a furrow, or path, or very loose earth, over which they can not pass, though they often perish in the attempt. Certain crops, such as flax and cow peas, are very objectionable to the chinch bugs, and by introducing rows of the same fields the insects may be prevented from passing from one to the other. These conclusions were reached by Prof. J. M. Stedman, of Missouri university, who has been experimenting with destroying insects, and has recently issued a pamphlet on the subject."

Prof. C. H. Eckles, of the university, department of animal husbandry, has just returned from a tour of the state, during which he has been investigating the feeding of young stock, and is now preparing a bulletin on the subject, to be issued in a few days. A remarkable statement in this report will be to the effect that perhaps \$20,000,000 is wasted annually by allowing calves to consume all the milk of the mothers until 6 or 7 months old. This is permitted by a vast number of farmers, says Prof. Eckles, and is an appalling waste of milk, and an entirely unnecessary proceeding. By so doing, the farmer is making beef, worth 5 or 6 cents a pound, out of butter fat, worth 20 to 25 cents a pound. By proper management, just as good a calf can be raised on milk after the cream has been taken out, as has been clearly demonstrated by scientific experiments. In his bulletin, Prof. Eckles will tell just how a calf can be raised on skimmed milk and grain food. The calf should be allowed the whole milk of its mother until 2 or 3 weeks old, after which skimmed milk should be gradually introduced. At the age of 6 or 7 weeks old, the animal should be subsisting entirely on skimmed milk and grain food. The latter should be given as soon as the animal will take it—frequently, but in small quantities at a time. This food should be either corn meal or cooled flaxseed. The former should be given first and the latter a few weeks later. All milk should be heated to a temperature of 100 degrees, and great care should be taken against overfeeding. Prof. Eckles believes that with a little care and extra labor many millions can be saved by adopting these methods.

**First Winner of the Victoria Cross**  
It will surprise most people to hear that the first winner of the Victoria cross "for valor" still lives, and in the person of Admiral C. D. Lucas, whose daring in promptly picking up overboard a live shell fired upon H. M. S. Hecla by the Russian batteries sent a thrill through the country in the early part of the Crimean war.

In connection with that unhappy yet heroic contest, the then young navy mate became as popular and famous as the soldier survivor, "Redan Massey," and both survived their exploits for many long and peaceful years. Originated by the prince consort, the Victoria cross was officially created in 1856, and in the following year the coveted distinction was bestowed by Queen Victoria, at a brilliant assembly, in Hyde park, upon 62 officers and men of the army and navy, of whom no fewer than 19 have survived to the present time.—London Modern Society.

**WHAT DRESSMAKER SAYS.**  
Bowknots are a favorite applique design. Box-plaited box coats are extremely modish. Clover leaf patterns appear in a number of silks. Usually the soft toned grays look well with yellow or brown hair. Basket weaves are much in evidence. Simplicity, not plainness, is the fashion. There is a good deal of moral support in a nice gown and hat.—Ladies' Home Journal.

Elaborate tucking in yoke effect serves to perfect the fit of many a dress skirt. Trailing skirts shortened immediately across the back are supposed by the wily Frenchwoman to make her appear younger. Red is struggling hard, and successfully, too, to compete with its less brilliant rivals, but it is such a trying shade that few are bold enough to attempt it. When it is becoming there is really nothing lovelier, and strange as it may seem, its brightness is one of the summer's smartest fads.

A MODEL HOG HOUSE.

Number of Animals It Will Accommodate Is Limited Only by Length of Structure.

The plan of this house was given us by one of the most successful swine raisers in the west—a gentleman who has frequently topped the Chicago market during the past 40 years. He holds that one of the most essential things in the business is a good house, properly constructed and kept clean. His building is

CONVENIENT HOG HOUSE.

16 feet wide, with a row of pens down each side, and a four-foot alley in the middle. The pens are six by eight feet, with a gate opening from each into the alley, and a window in each. The house stands north and south, so that the sun can shine in both from the east and the west. The entrance ways are at the ends of the alleys. The foundation is built up two or three feet from the ground so that there is a free circulation of air beneath, and no chance for rats or mice to harbor. There need be no fear of cold in winter as a house of this kind, if built with any degree of care, will not freeze even in the coldest weather with a drove of sleeping swine in it. In fact some care must be ex-

DIVISION OF THE HOUSE.

ercised to give good ventilation so that the animals will not become overheated and catch cold in the open air at meal time. A good roof that will turn snow and rain is essential. With cracks battened and tight doors and windows, the temperature can be controlled by watching the ventilators, which can be the windows, or shutters placed in the gable ends for that purpose. The number of hogs the house will accommodate will be limited by its length.

This house is designed for sleeping quarters mostly, although it may be used by sows at farrowing time. A layer of straw scattered over the floor will make sufficient bedding. This should be changed as often as it becomes dirty. If the hogs are given proper attention, there will never be other cause for cleaning out the pens. Catching an individual hog is an easy matter. Watch when he goes into the house, follow him into a side pen, drop the gate and he is yours. Loading for market, too, is an easy job. Let a chute be arranged at the end of the alley, if the elevation is not sufficient to make the floor on a level with the wagon bed, get the hogs into the pens, close one alley door and back up the wagon at the other, lift the gate, drive the hogs into the alley, then into the wagon.—J. L. Irwin.

### NOTES FOR SHEPHERDS.

Feed regularly as well as liberally. Give pulverized alum for scours, with wheat bran. Have water convenient for your sheep. They drink little and often. Keep the lambs growing from the start. If fat, sell them when they weigh 30 to 50 pounds. Ewes that prove poor mothers, or refuse their own lambs, might as well go to the butcher.

Do not feed lambs on rape alone, but accustom them to it gradually when fed with other fodder. An authority on lambs for market says pure-bred or high-grade lambs should not be kept beyond six months.

In feeding shredded corn fodder to sheep, bran and oats may be mixed with the stover to avoid any trouble that may come from overfeeding of carbonaceous elements.

If sheep have catarrh, put them in a well-ventilated pen and give each, twice a day in their food, a teaspoonful of a mixture of equal parts dried sulphate of iron, powdered ginger and gentian roots. Feed generously of oats, bran, roots and good hay.—N. Y. Tribune-Farmer.

**Soil for Sweet Potatoes.**  
The sweet potato does best in a well-drained, sandy, loam soil, which has been previously enriched with barnyard manure. Wood ashes help matters along and increase the yield of tubers. In cultivating do not run the implement near the roots, as this may do much damage. Tillage, should, however, be continued as long as possible, but will finally have to be stopped on account of the vines covering the top of the ground. After that the big weeds that appear should be pulled up, or, if that cannot be done, they should be cut off. It has been found profitable to set the slips in rows about 18 inches apart in the rows, with the rows three feet apart.—Farmers' Review.

**Heavy Deal in Cattle.**  
Frederico Terrazas of Chihuahua, Mexico, recently closed at Fort Worth, Tex., one of the heaviest cattle deals ever made in this country, selling 25,000 cattle at private terms for various points, transportation to which will require 40 trains of 15 cars each, on which the freight charges will reach \$60,000. The Terrazas ranches include \$60,000,000 acres, on which there are now 250,000 cattle; 75,000 calves were branded this year.

## PIG FEEDING TESTS.

Character and Causes of Soft Pork Discussed by Prof. Frank T. Shutt, of Canada.

The Canadian experimental farm authorities have issued a report by Prof. Frank T. Shutt, chemist at the farm, upon the character and causes of soft pork. Softness in pork is a serious defect, and so the question is of great importance to the Canadian bacon industry. Prof. Shutt summarizes the results of his experiments as follows:

1. That all of the grain ration employed that consisting of equal parts of oats, peas and barley gave the firmest pork. It may further be added that the fat was deposited evenly and not too thickly, and that this ration gave a very thrifty growth.
2. That no difference could be observed in the firmness of the pork from the preceding ration, whether fed soaked or dry.
3. That when half the grain ration consists of corn meal the resulting pork shows an increased percentage of olein—in other words, a tendency to softness.
4. That in this ration (half corn meal, half oats, peas and barley in equal parts), the feeding of it boiled gave a slightly higher olein content, but this is only apparent when the average from the four pens is taken into consideration.
5. That, considering the effect of feeding the ration of oats, peas and barley during the first period to a live weight of a hundred pounds and corn meal during the finishing period, compared with the reverse of this plan—that is, corn first, followed with oats, peas and barley—we may conclude that the former gives a firmer pork.
6. That in both methods mentioned in the preceding paragraph no marked difference was to be observed from the ration fed dry or previously soaked, though taking an average of the two groups on each ration the "dry" feed gave a somewhat higher olein content.
7. As when corn meal formed half the first period ration and the whole of the second period ration, the resulting pork was somewhat softer than from that of any of the rations already discussed. We conclude that the longer the period during which the corn is fed as a large proportion of the ration the softer will be the pork.
8. That beans produce a soft and inferior pork. The growth of the pigs so fed was poor and miserable and the deposition of the fat meager.
9. That corn meal fed exclusively as the grain ration, either dry or previously soaked, results in an extremely soft fat, the percentage of olein being considerably higher than from any other ration tested. The pork was of an inferior quality. Here also we noted the miserable growth of the animals, the ration in no sense being an economical one.

**EXCELLENT PIG TROUGH.**  
Besides Assuring Convenience and Cleanliness It Enables Each Pig to Get Its Share.

To stop pigs properly make a trough of oak boards one and one-half inch thick, and of any length or width desired; one board eight inches and one ten inches wide will make a trough suitable for all but very small pigs. Nail them together V shape, letting the ten-inch board go over the eight-inch to make the sides even. Nail on ends; divide the trough into nine to eleven equal spaces. From an oak board one inch thick and six or eight inches wide, saw V-shaped partitions, with one corner a right angle, and two corners half right angles. Fit the pieces and

fill with six-penny finishing nails. Fig. 1 shows the pig side of the trough when set in the fence of the pig pen. The upper part of the partitions that stand above the trough are nailed to the fence board, and the ends of the trough to the posts. The trough must be level and project three or four inches on the outside thus allowing a clear space the whole length to pour in swill. Besides the convenience and cleanliness each pig gets its proper share. This individual trough is also fine for feeding dry feed.—P. C. Laclede, in Epitomist.

**Canadians Enter a Protest.**  
Horse breeders of Canada are alarmed at the large exportations of bronchos from the United States into that country. The Clydesdale directors met lately and discussed the question how to prevent the great injury that will be done to the breed of Canada's horses, if this condition of affairs is permitted to continue. Horse breeders complain that the duty on horses imported into Canada from the United States is only two dollars, while any exporter of horses into the United States must pay \$30 on each animal. The broncho growers of the west have taken advantage of the low tariff, and have been selling great numbers of horses in Canada, and already the result is seen in the deterioration and smallness of many of the horses on Canadian farms.

**Selection of Breeding Stock.**  
In buying breeding stock the breeder should select animals that are strong where his weak. Too many settle the purchasing question by a certain financial standard rather than that of first finding the individual suited to their needs and then talking cost afterward. Too many men desire to buy stock at hardly any butchers' prices, and expressed no willingness to pay a premium to the man who is offering them animals that have been produced at great cost and effort. No stock should be purchased unless personally inspected; reliance on the judgment of others is unsafe.—Prof. C. S. Plumb, in Farm and Home.

**Refuse all substitutes said to be "Just as Good."** This remedy has stood the test of years of successful battling with disease. Get the genuine. It will produce the results you desire. 19-ounce bottle for \$1.00.

### OUR NATIONAL WEALTH.

There are said to be 3,500 millionaires in this country. The building and loan associations of the country have total assets of \$581,866,170.

It is estimated that the wealth of the United States in 1900 was \$94,000,000,000.

The total money in the United States, consisting of gold and including bullion in the treasury, United States notes and bank notes, is said by United States treasury officials to be \$2,483,147,392, which is \$31.94 per capita.

It is an interesting fact that the total deposits in the savings banks in the United States (\$2,597,094,580) represents a sum a trifle more than the total money in the country, and a fourth larger than the national debt.

### RHEUMATISM CURED AT LAST.

Lake Sarah, Minn., May 12th.—Thousands will read with pleasure that a cure for Rheumatism has at last been found.

A Mrs. Hildebrandt, of this place, after trying every way medicines, has recently found a successful remedy for this painful disease.

This woman suffered so with the Rheumatism in her arms that sleep or rest became impossible.

She heard of Dodd's Kidney Pills, but having little faith in anything, was very reluctant to spend any more money for medicine.

However, she decided to try one box, and this helped her so much that she continued to use the Pills. Now she says:

"I am real well, and I don't know how I can express my thanks to Dodd's Kidney Pills for what they have done for me."

**Boston Is Unique.**  
A Chicagoan had been taken around Boston all day to observe her bulwarks, but had failed to observe any of those symptoms of paralysis which are acceptable to the Bostonian mind. "Now confess," said the Bostonian host, after the burden and heat of the day, "isn't Boston a unique town?" "Unique," mused the westerner, "I believe that word is derived from two Latin words, unus, one, and ego, horse. I think Boston is a unique town."—Chicago Chronicle.

**A Rapid Rise.**  
"I," says the self-made man with some pride, "began life as a corn doctor, but after working a year at that profession invented a dandruff cure that has made me independently rich."

**This shows that if we begin at the foot it doesn't take long to reach the head, or something to that effect.**—Baltimore American.

**ELEGANT DINING CARS.**  
New Service Inaugurated on the Iron Mountain Route.

The Iron Mountain Route has inaugurated a new dining car service on its fast daily trains from St. Louis, Memphis and intermediate points to Texas. These cars have just been turned out of the Pullman shops and are models of skillful workmanship. They are handsomely fitted up, thoroughly equipped with the latest appliances and lighted with electricity. They are also supplied with electric fans.

Meals are served in a carte from dainty Haviland china, Lubby cut glassware and elegant silverware.

This is the only line running dining cars from St. Louis to points in Southern Missouri, Arkansas and Texas. It has a triple daily service between St. Louis and Texas and a double daily service between Memphis and Texas of Pullman sleeping cars with electric lights, fans and all up-to-date appliances.

**Well Named.**  
Mrs. Bacon—Why do you suppose they call employment agencies bureaus?

Mr. Bacon—Because a fellow can never find what he wants in one, I suppose.—Yonkers Statesman.

**Train Ran 180 Miles in 180 Minutes.**  
Springfield, Ill., April 16.—The Continental Limited on the Wabash Railroad has made a new record for speed on Granite City, making 180 miles in 180 minutes. This was with five stops—three station stops, one to change engines and one to take on coal. The actual running time was two hours and thirty-eight minutes. The run from Danville to Decatur, 71.6 miles, was made in 70 minutes, including stops at Danville and Decatur.—St. Louis Republic, April 17th, 1902.

**Native Pride.**  
"I suppose," said the easterner, sarcastically, "you never have a single cyclone in your country."

"Right you are," said the Kansan, boastfully, "we never have anything less than a bi-cyclone or a tri-cyclone here."—Catholic Standard and Times.

**The First Boarding-House in History.**  
is the basis for a unique little story in The Four-track News for May. It is entitled "The Prophet's Chamber," is appropriately illustrated, and contains information that every farmer's wife in New York and New England should have. The Four-track News will be mailed free to subscribers in the United States for 50 cents a year; single copies, 5 cents. Address Geo. H. Daniels, Publisher, Grand Central Station, New York.

**Only a Bird.**  
Nervous Lady (as a large bird flies before the vessel)—Oh, captain, is that an omen?

Matter-of-Fact Captain—No, madam; that is a seagull.—Judge.

**Stops the Cough and Works ON the Cold.**
